SKILLS

- Java
- JDBC
- Git/GitHub
- HTML
- CSS
- ReactJS
- JavaScript
- Tailwind CSS
- SQL

PROJECTS

Recipe App

- The HTML structure includes an input field for searching recipes and a container to display the fetched recipes.
- CSS styles are added for basic formatting.
- JavaScript handles user input, fetches recipe data from the API, and dynamically updates the UI with the fetched recipes' titles, summaries, and links.

Crud Operation

- CRUD stands for Create, Read, Update, and Delete. It's a set of basic operations that are essential for managing data in most software applications, including web applications built with React.js.
- CRUD operations are fundamental to any application that deals with data
- They enable users to interact with and manipulate data, whether it's creating new records, reading existing ones, updating them, or deleting them
- In a React.js application, these operations are typically implemented through a combination of user interface components, state management, and communication with a backend server or API.
- The data which are stored that are stored by a temporary database

QR Generator

- A QR (Quick Response) code generator using JavaScript is a tool that allows users to dynamically create QR codes directly in their web browser without the need for server-side processing
- QR code generator using JavaScript provides a convenient way for users to create QR codes on-the-fly directly within their web browser, making it easy to share information or encode data for various purposes.

EDUCATION

Bachelor of Technology in Computer Science

College of Engineering Bhubaneswar • 2019-2023 (8.0 CGPA)

Education 12th

Y.B.K Intermediate College • 2019 (79%)

CERTIFICATIONS & COURSE

Java Full Stack Jspider-Tranning & Development Center

Feb 2023
